URBANIZATION AND DEVELOPMENT

MULTIDISCIPLINARY PERSPECTIVES

Edited by
Jo Beall, Basudeb Guha-Khasnobis,
and Ravi Kanbur

UNU-WIDER STUDIES IN DEVELOPMENT ECONOMICS

'This is a vital collection of essays exploring the full spectrum of perspectives on the connections between urbanization and human progress in the global South. It should be essential reading for academics and decision-makers in development studies, economic development, spatial planning, policy analysis and urban and regional studies.'

*Ivan Turok, Deputy Executive Director, Human Sciences
Research Council, South Africa*

'This volume is a welcome addition to the growing urban literature, particularly for exploring a multi-disciplinary approach to the relationship between cities and development and, equally, for recognising the hope and opportunity that cities can offer.'

William Cobbett, Manager, Cities Alliance

'With over half of the world's population residing in towns and cities, the future of humanity is obviously urban. While the rapid pace of urbanization in developing countries brings with it various challenges, it also offers numerous possibilities. If properly managed, urbanization can provide vital opportunities for economic, social, cultural and human advancement when growth is well-managed. *Urbanization and Development* is thorough and authoritatively written; it makes a valuable contribution to the understanding of urban issues from a multidimensional perspective. The book also emphasizes the importance of the urban context in addressing developmental issues—a feature previously lacking in development policy.'

*Anna Kajumulo Tibaijuka
Under-Secretary-General and Executive Director
United Nations Human Settlements Programme (UN-HABITAT)*

'This collection presents state of the art findings on cities and development which draw on a wide range of different but equally rigorous approaches from a variety of disciplines. It suggests some fresh methodological starting points for both academic and policy research on cities. It stages conversations amongst disciplinary perspectives which are currently seldom drawn together, and sets the agenda for the innovative and interdisciplinary research which is needed to respond to the substantial challenges of city life around the world.'

Jennifer Robinson, Professor of Geography, University College London

'The authors provide a state-of-art analysis of the positive, as well as the negative, implications of contemporary urbanization in a book that exemplifies the value of the multidisciplinary perspective of development studies.'

*John Harriss, Professor and Director,
School for International Studies, Simon Fraser University*
